

Right Reporter® Applications

Avman has developed a range of applications for specific verticals using Right Reporter.

Targeted at non-technical end users, the applications require a software programmer to initially connect it to the relevant data. After that, authorized end users can design, create and edit their own reports, and administrators can jointly view the reports to get an overview of a specific department or location. Available for a range of organizations, these applications can be installed as-is or enhanced using Avman's consulting services.

EDUCATIONAL SUITE

> Title I

This application is a data capture and maintenance system to manage student information required for Title I program, which is part of the No Child Left Behind initiatives. The application supports information collection and maintenance screens for students enrolled in the program in Pre-K, K thru 7 grades

The package has a light footprint and requires minimal resources.. For mid-sized school districts of up to 100 teachers, the system can be co-located on spare servers. No additional database packages are required as the application is based on MS-Access.

For larger school districts, the application can run on Sun/HP/AiX and any high performance database like Oracle, MySQL, postgresSQL or SQL Server by simply changing a single properties file.

> Title I Reports

Based on the Right Reporter - Enterprise version, this provides custom meta-data geared around the Title I database. The application comes with the pre-imported Title I database so that Title I administrators can start creating their own reports immediately.

The application comes with over 50 pre-built reports.

Simply Savvy Reporting

MEDICAL SYSTEMS

> Front Office

This application offers a data capture system that allows doctors and patients to enter and view information on the web. The application can be installed on an intranet or on the Internet.

The application utilizes the next generation Right Reporter Infrastructure to allow users to quickly create their own applications.

> Hospital Information

This data capture system allows doctors and patients to enter and view information on the web. The application can be installed on the intranet or on the Internet.

The application utilizes Right Reporter Infrastructure to enable users to create their own application and allows doctors to interface with the system via WAP devices such as PDAs and cell phones
